PowerData Technologies
The power to connect

PDU's with digital amp meters

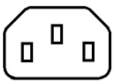

- Measures Amps
- Vertical or Horizontal PDU
- 10A, 13A, 16A or 32A feed
- Monitors Volts
- UK, C13, C19 or Schuko socket
- Can be fitted to most PDT PDU's

Local amp usage monitoring allows the user to realise the power consumption of the rack equipment in real time, giving the opportunity to change power configurations based on that information.

The digital readout displaying live values for both voltage and amperage usage.

Most PowerData Technologies PDU's can have the Ammeter fitted, meaning any socket or plug combination is achievable, the Power Meter itself is rated up to 100 Amps, so if there is space in the PDU the Amp / Volt can be utilised.

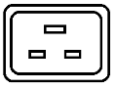

PDU plug options other than 13A

IEC C14 plug
IEC 60320(320)

16A commando plug
IEC 60309(309)

IEC C20 plug
IEC 60320(320)

32A commando plug
IEC 60320(309)
