Desk to Floor ‘Slinky’ Cable Tidies

Cable management for the desktop is not only important from a health and safety perspective with regards to trip or tangle hazards but moreover the unsightly ‘spaghetti’ caused by power, data and AV cables makes moves and changes around the office time consuming and problematic.

PowerData Technologies Slinky cable tidies allow the segregation of power and data cables as detailed under BS6396, we offer three styles in a neutral silver finish, two for standard desk and one for sit/stand desks and workstations.

Standard Desks
For standard desks we have the ZIP and the DPS-SR, the ZIP as you’d imagine does what it says, a simple colour co-ordinated zip down one side with simple felt ‘Velcro’ type management inside, it is by far the fastest product to install.

The DPS-SR uses a 2-comparment modular block system which can to added or subtracted to suit the application, cables are pushed through each segment into the left or right-side cavities.

Sit/Stand Desks
Like the DPS-SR, the longer DPS-SSW uses a modular system that can be added to, the design of the segments is more of a rectangular style so when the desk is in its lowest position the spine has folds its self into a neat package.

This product has 4-compartments to better balance the cables inside as the desk lifts and down throughout the working day.

All three products are fixed under the desk and have weighted bases and fixing screws.

PowerData Technologies also offer horizontal under-desk cable management and cable tray.

Order Codes

ZIP	800mm fabric slinky with Zip fastening & weighted base.
DPS-SR	800mm 2-comp 15 segments with weighted base.
DPD-SSD	1300mm 4-comp 25 segments with weighted base.
